

## Elix-ACT HYALU

INCI Sodium hyaluronate  
CAS 9067-32-7

### SPECIFICATIONS

Aspect White powder  
Molecular weight < 750k Da  
750k-1500k Da  
1500k-2500k Da

### GENERAL INFORMATION

Elix-ACT HYALU for cosmetic use is a type of salt extracted from the reaction between hyaluronic acid and sodium hydroxide, which presents a better water solubility and can be therefore used for the preparation of many different cosmetic products.

Hyaluronic acid is a glycosaminoglycan, produced by the human body and present in the connective tissue, cartilages and, of course, in the skin. Its function is to protect tissues from the penetration of bacteria and viruses and to keep them constantly hydrated.

Connect Chemicals offers Elix-ACT HYALU with three different molecular weights, each of which brings benefits to the body and skin:

- High molecular weight, formed by macromolecules, is able to retain a large amount of water. Used on the skin, it forms a protective film that keeps it hydrated for a long time, avoiding the evaporation of water. It is excellent for very dry skin and has an anti-aging and firming action.
- Low molecular weight, composed of micro-molecules, it is the form that penetrates deeper, providing less hydration than Elix-ACT HYALU with high weight, but has greater anti-wrinkle and plumping properties. It is mainly used for the treatment of mature skin.

### FORMULATION & RECOMMENDATIONS

To ensure a successful incorporation of Elix-ACT HYALU in your formulation it is important to respect the recommended doses and to avoid exposition to high temperatures. We recommend adding after cooling down at the same than the usual other active addition and/or preservatives & fragrances. Furthermore, the gel pH shall be adapted to skin use. To obtain a functional gel it is necessary to respect the hydration times ranging from 12 to 24 hours.

Added pure in the formulations, the hydration times are reduced to a few minutes.

Why not combine the benefits of high and low molecular weight in one product, to benefit from the best moisturizing while exhibiting greater anti-wrinkle and plumping properties: an ideal treatment for mature skin.

#### Recommended use concentration

in a maximum percentage of 1% for a gel from 0.01% to 0.5% if inserted pure (once formulation cooled down)  
in a maximum percentage of 0.5% in face masks  
in a maximum percentage of 0.2% in the emulsions

#### Solubility

Soluble in water forming a viscous solution.

### EFFICACY

- Keep the skin constantly hydrated
- Prevent dryness and peeling
- Firming and toning
- Illuminate the dull and dull complexion
- Protect skin from external attacks
- Treat and prevent the formation of fine lines
- Relieve irritation and itching due to very dry skin

### BENEFITS

- Produced from 100% natural
- COSMOS/ECOCERT certified
- 3 molecular weights for different benefits

### APPLICATIONS

#### Cosmetics

- Skin care
- Baby care
- Make up
- Sun care

### REGULATORY

ECOCERT/COSMOS Approved  
Natural Index 1  
(according to ISO 16128)

### SHELF LIFE

Under proper storage conditions the shelf life is 24 months
